**Dr. Ian Dunbar’s Aggression Scale**  
**Town of Cardston**

**Animal Bylaw #1679**

<b>Level 1</b>	Dog growls, lunges, snarls-no teeth touch skin. Mostly intimidation behavior threatening behavior
<b>Level 2</b>	Teeth touch skin but no puncture. May have red mark/minor bruise from dog’s head or snout, may have minor scratches from paws/nails. Minor surface abrasions or lacerations
<b>Level 3</b>	Punctures one to three holes, single bite. No tearing or slashes. Victim not shaken side to side. Bruising.
<b>Level 3.5</b>	Multiple Level 3 bites
<b>Level 4</b>	One to four holes from a single bite, typically contact/punctures from more than canines only, considerable bruising. Black bruising, tears and/or slashing wounds. Dog clamped down and /or shook head from side to side
<b>Level 5</b>	Multiple bites at Level 4 or above. A concerted, repeated attack causing a severe injury.
<b>Level 6</b>	Any bite resulting in the death of an Animal

This Scale is developed by Dr. Ian Dunbar PhD. BVetMed, MRCVS, of Berkeley California. From his studies Dr. Dunbar has been able to separate and classify bites into a generalized six level assessment protocol. This scale is used as a standard throughout the world in canine aggression investigations and behavior assessments. Updates in 2012 for the City of Calgary Animal Services.

**Bite Inhibition**

“Inhibitions are the mechanisms which compel an animal to interrupt an action in the middle of a sequence.” (i)  
 “Good bite inhibition does not mean that your dog will never snap, lunge, nip, or bite. Good bite inhibition means that should the dog snap and lunge, his teeth will seldom make skin contact and should the dog’s teeth ever make skin contact, the inhibited “bite” will cause little, if any, damage.”
